

Incognito. Who can still see?

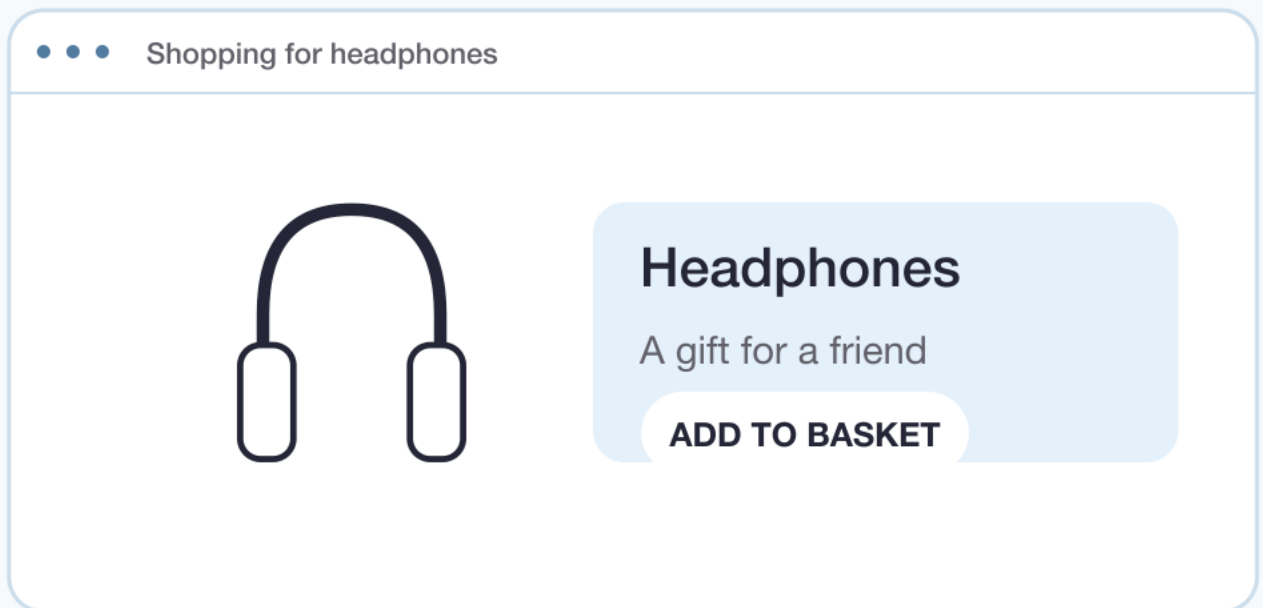

You open a private window.
Does that make your visit a secret?

Let's follow one visit.

You're buying a surprise gift.

You use Chrome on a shared laptop.
You don't want the visit in its history.

History is the list of websites you visited
that Chrome saves on the laptop.

What is a cookie?

A cookie is a small bit of information a website asks your browser to remember.

Your browser is the app you use to visit websites.

“You’re signed in.”

Like a little reminder.

“Basket: headphones.”

So your basket stays filled.

Some cookies help the site work.
Others help track activity for advertising.

These notes are examples, not the actual cookie code.

NOW OPEN INCOGNITO

It starts with a blank page.

It keeps your usual website reminders apart.
It can make new, temporary ones as you browse.

It doesn't erase your old Chrome history.
It opens a separate space for this visit.

WHEN YOU ARE FINISHED

Close every Incognito window.

Chrome removes those temporary reminders. It doesn't add these visits to its history.

Closing one tab may not be enough.
Close all Incognito windows in Chrome.

The shop can still record your visit.

The website can keep a record of the pages you opened, even in Incognito.

SHOP'S VISIT LOG

Viewed:
Headphones

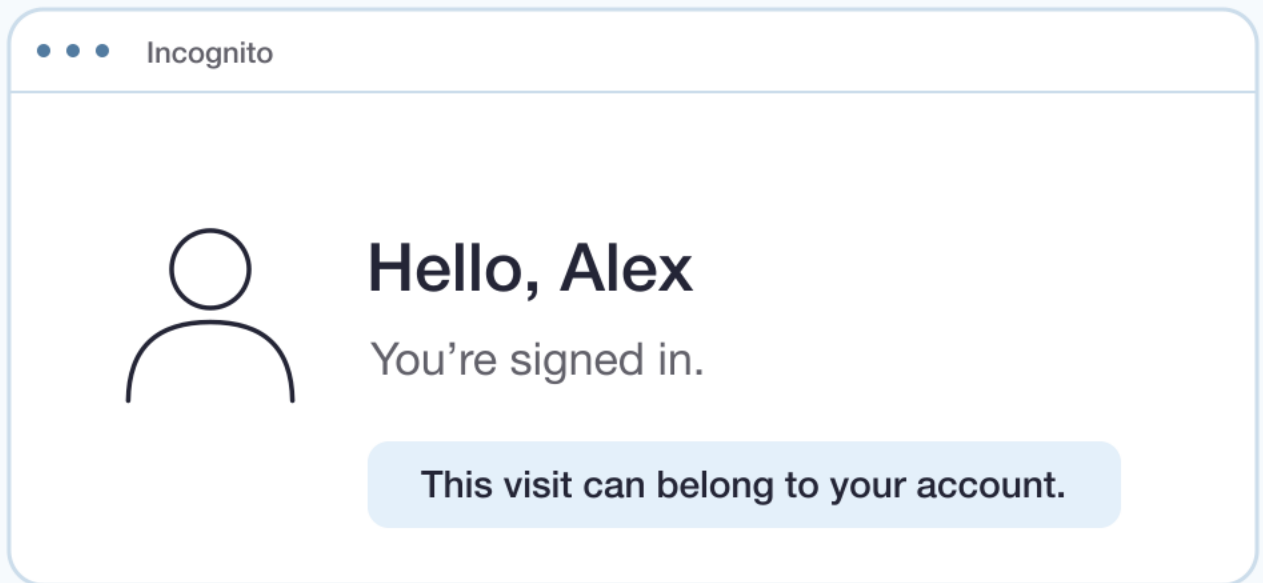

It can also see your IP address: a number used by your internet connection.

Incognito does not hide that number.

AND IF YOU LOG IN?

The shop knows which account is yours.

Type your email and password to sign in.
The shop can link this visit to your account.

The private window doesn't hide
the identity you just gave the shop.

The trip isn't hidden either.

Your internet company may still see which websites you connect to.

WEBSITE ADDRESS

example.com

What you read or type

Protected while travelling with HTTPS

**HTTPS scrambles page contents as they travel.
That protection is separate from Incognito.**

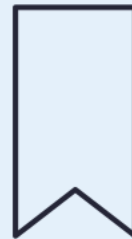

A work or school device may have extra monitoring.

Download a file? It stays.

A downloaded receipt

Still on the laptop

A saved website link

Called a bookmark

**Closing Incognito doesn't delete downloaded
files or saved website links.**

NOW YOU KNOW WHAT IT DOES

Private on your laptop. Visible to the shop.

ON THE SHARED LAPTOP

Your Incognito visits stay out
of Chrome's browsing history.

AT THE SHOP

The website can still keep records.
Log in and it knows your account.

When done: close every Incognito window.

Remember that saved files remain.
