

You told it. It forgot.

Your chat history and what the AI uses for its next reply can be different.

YOU / EARLIER

Budget: \$600

AI / LATER

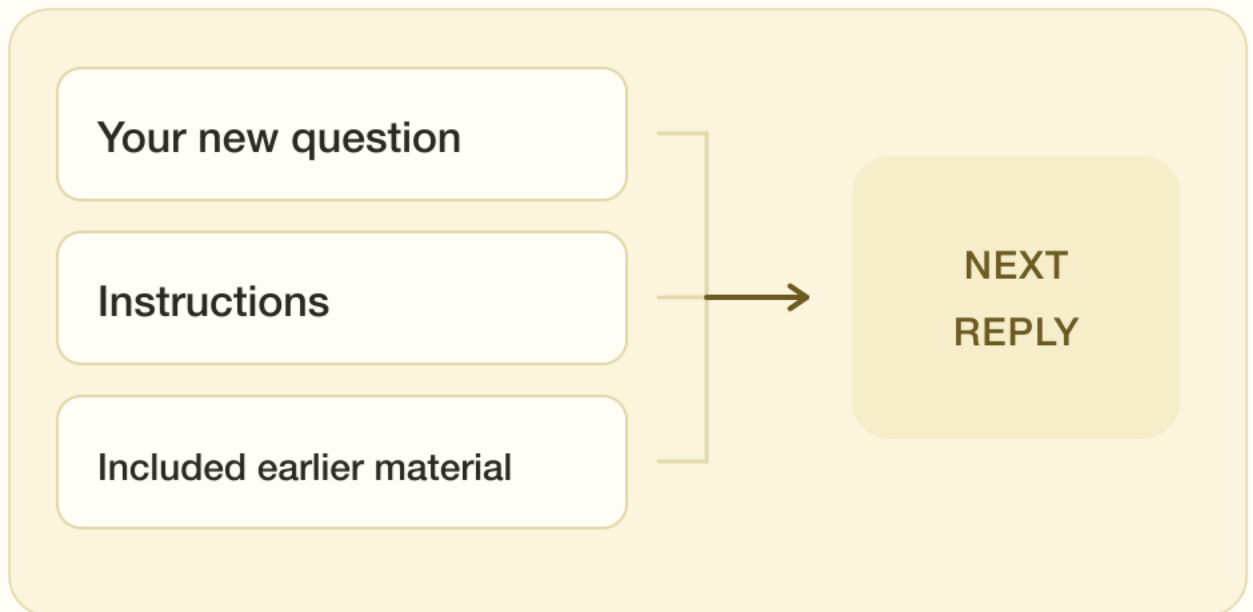

Here is a \$900 trip.

Where did the limit go?

Fictional travel-planning example.

Each reply needs its own context.

Context means the information available now: your question, instructions and the earlier messages or files the app includes.

Think working desk. Not whole library.

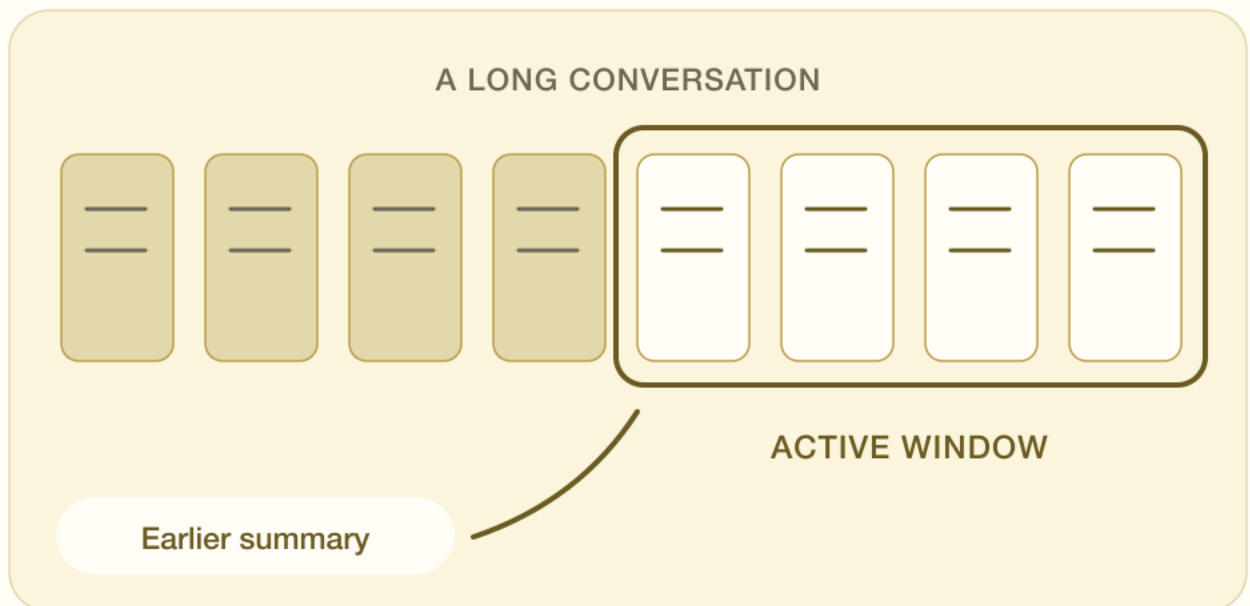

The context window is limited working space.
Messages, files, images and the new answer
can all use that space.

A desk is an analogy. Limits vary by model and app.

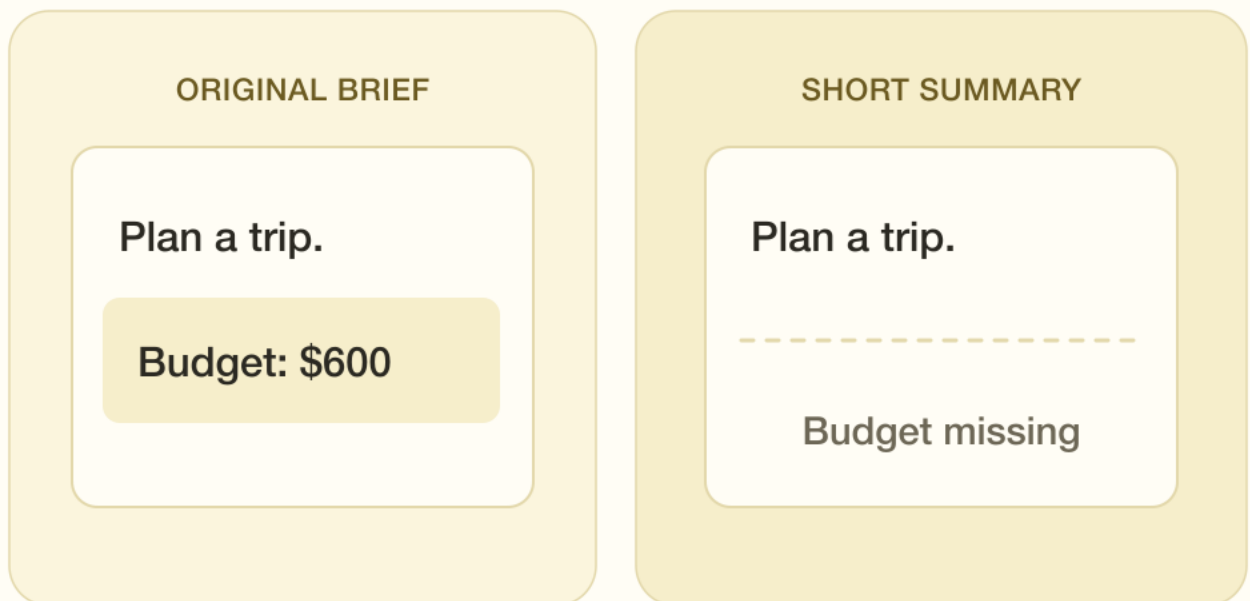

The chat grows. The space has a limit.

Depending on the app, older material may be summarized, left out or retrieved when needed.
The visible history is not always the active input.

Shorter notes. Sometimes less detail.

A summary may keep the goal
but omit an exact budget, date or decision.
That detail may need to be sent again.

Illustrative summary, not an actual app transcript.

ANOTHER REASON

In view does not mean understood.

Even when a detail is available,
the model can miss it or use it incorrectly.
A bigger context is not perfect recall.

AVAILABLE INPUT

Budget: \$600

PROPOSED REPLY

A \$900 trip

Detail is present

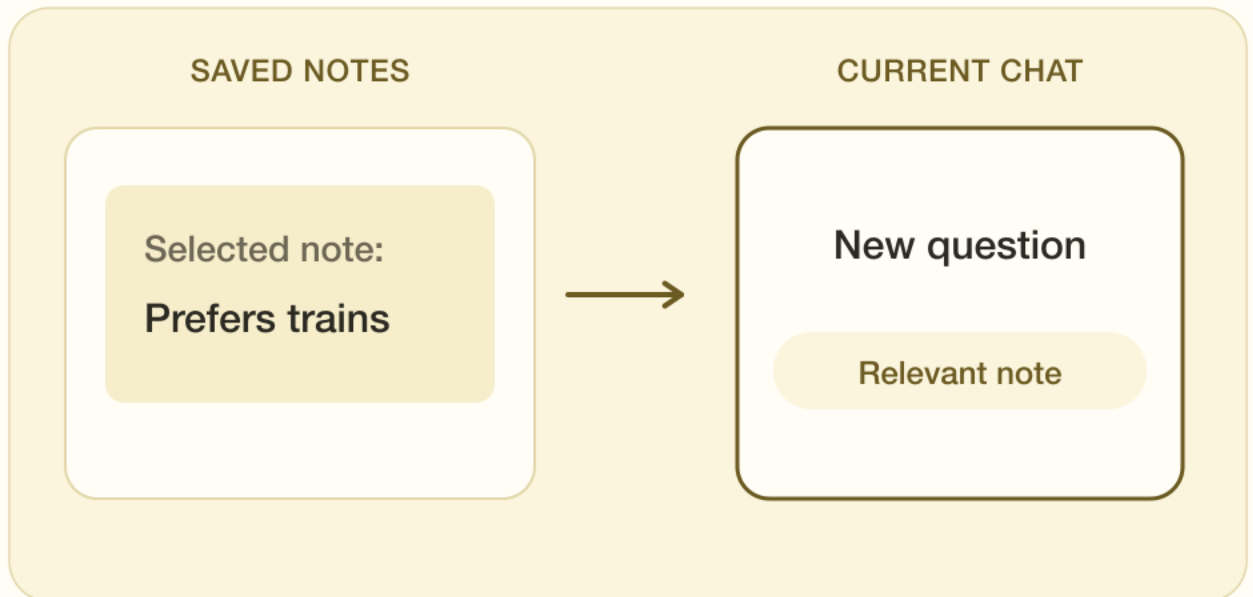

Result still wrong

Always check the actual result.

Saved memory is separate.

Some apps keep selected notes across chats.
That is not the same as reading every old message.
Availability and settings vary.

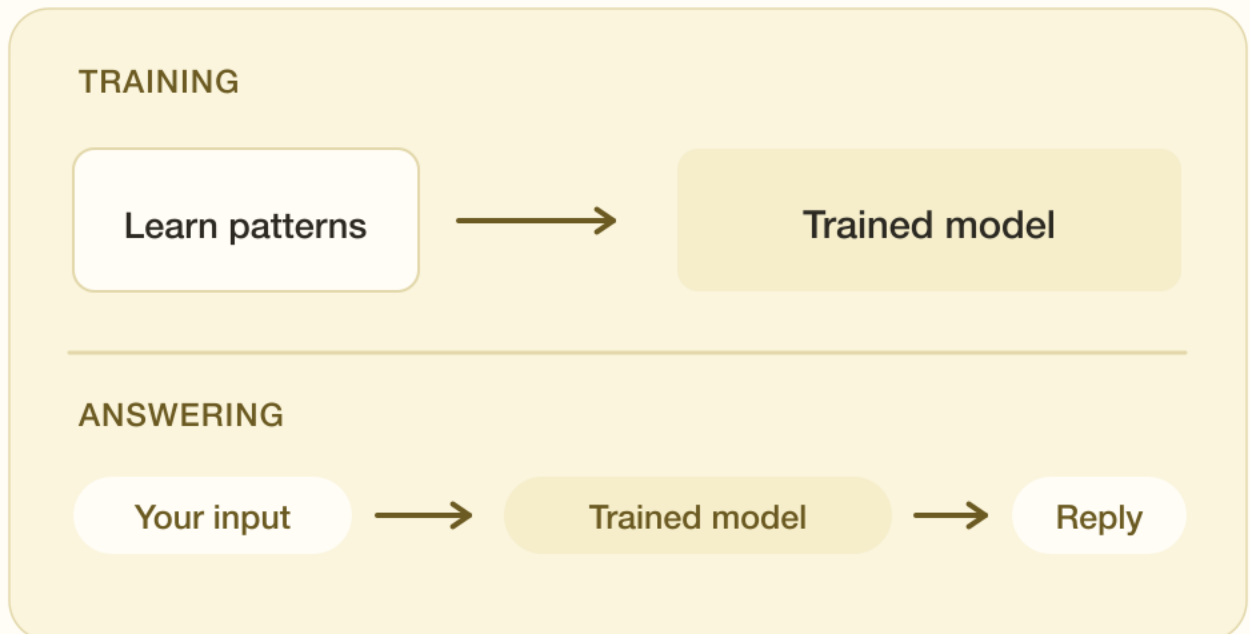

Chatting is not instant retraining.

Training teaches the model patterns.

A reply uses a trained model with current input.

Sending a message is not itself a training step.

Later use of chat data depends on the service and settings.

Give it a short, current brief.

Restate the goal, limits and latest decisions.
Ask it to list the constraints before answering.
Then check that the result follows them.

CURRENT BRIEF

Goal: a weekend trip

Limit: \$600 total

Decision: no car rental

Restate

Confirm

Check

A fresh brief helps. It does not guarantee correctness.

Re-send what matters most.

For long work, keep a current brief.
Check important names, dates and numbers.
Do not assume the whole history was used.

CONTEXT

Available for this reply

SAVED MEMORY

Selected notes, if enabled

TRAINING

Learned model patterns

Keep the goal, limits and latest decisions together.
